kscrip - Having fun with Kotlin scripting

release v2.7.1 build passing chat on gitter

Enhanced scripting support for [Kotlin](#) on *nix-based systems.

Kotlin has some built-in support for scripting already but it is not yet feature-rich enough to be a viable native in the shell.

Shares

Particular this wrapper around [kotlininc](#) adds

Compiled script caching (using md5 checksums)

Dependency declarations using gradle-style resource locators and automatic dependency resolution with [jcabi-aether](#)

More options to provide scripts including interpreter mode, reading from stdin, local files or URLs

Embedded configuration for Kotlin runtime options

Support library to ease the writing of Kotlin scriptlets

Deploy scripts as stand-alone binaries

Taken all these features together, [kscrip](#) provides an easy-to-use, very flexible, and almost zero-overhead solution to write self-contained mini-applications with Kotlin.
